

# There They Go Again !

by Earl P. Holt III

Ronald Reagan once politely called out Jimmy Carter for lying during a 1980 Presidential Debate by declaring "*There you go again.*" Much like Joe Biden, Carter's blunders were so disastrous and pervasive that he was forced to lie like a Clinton to hide them from the American people.

In the same vein, a recent study appearing in a publication of the **AMERICAN MEDICAL ASSOCIATION** claimed to find a dramatic increase in firearm injuries and deaths among black "*children*" during what many of us consider the "*scamdemic.*" Its authors attribute this phenomenon to violence associated with "*structural racism*" and with "*less racial and economic privilege*" among blacks. **THERE THEY GO AGAIN !**

**What this study really exposes is just how easy it is to obtain grants from the NIH or CDC if your subject matter involves leftist politics masquerading as "*public health.*" Then, one is free to employ quack assumptions and dubious methodologies to assist other leftists in attacking their traditional targets, so-called "*white privilege*" and the **Second Amendment.** (Jay, Martin & Patel. "*Analyzing Child Firearm Assault Injuries by Race...*" **JAMA Network Open**, 3/08/2023.)**

The study claims that the risk to black children of being shot during the scamdemic was more than 50 times the threat to white children. (0.54 per 100,000 *person-years* among whites versus 27.1 among blacks.) Extrapolating from Philadelphia, New York City, L.A. and Chicago, they concluded that fatal and non-fatal firearm assaults nearly doubled among blacks 18 and younger between 2015 and December 31st of 2021. Meanwhile, shootings of white children did not increase in frequency. (*Go figure!*)

According to one of the study's authors, Jonathan Jay of **Boston University's School of Public Health**, *"This study shows...how structural racism, including the inequitable distribution of resources, residential racial segregation, and distribution of opportunities not only harms children of color, but privileges white children."*

The study refers to its subjects as **"CHILDREN"** since their focus is on those under the age of 18. However, as CDC and NIH-funded studies have done several times in the past, its authors deceitfully include **"GANG-BANGERS"** along with their innocent victims to inflate the study's data. *Gang-bangers* are hardly *"innocent victims"* as the authors imply, and most are killed or injured in those gun battles that occur every night and add *ambiance* to the cesspools we call *"large, urban areas."*

**"Innocent Victims" ???**

Apparently, "*not being shot by fellow whites*" is now considered one of the many "*privileges*" we whites supposedly enjoy relative to blacks. But for some reason, these *doctors-masquerading-as-criminologists* never examine the behavior of the very people whose misconduct they routinely excuse and enable.

It doesn't seem to occur to them that the problem just might reside within a race of mentally and morally deficient individuals, who often shoot each other for wearing the *wrong color*, flashing the *wrong gang sign*, or for "*mugging*" each other with hard stares. They are also frequently inclined to murder each other in order to steal a competitor's money and drug "*stash*."

The *American Medical Association* should forego its new preoccupation over race and crime, because most of its practitioners are *dilettantes* on the subject and know little or nothing about it. They should leave this area of investigation to hard-headed and unsentimental people like myself, who actually know something about it. My *Doctorate in Nigrology* allows me to recognize things they will never understand until the day they are fatally shot during a car-jacking. Then, their understanding will have come too late...
