

Serial Killahs

When my predecessor, Gordon Baum, and I hosted a talk radio show in St. Louis from the 1990s until the early 2000s, we did NOT pull any punches when it came to black crime, black illegitimacy, unparalleled black welfare participation, or the comparatively low IQs of blacks. This often prompted death threats from angry blacks. When death threats failed to silence us, they would call up the show and throw ludicrous "facts" at us that were absurd on their face.

One of the "statistics" they often used was the fabrication that "**most serial killers are white.**" This never made much sense to intelligent whites because blacks lead the known universe in murder statistics, and it was highly unlikely they wouldn't be equally prominent in statistics involving serial murderers. Gordon's inspired response was that since black criminals tend to be "nightcrawlers," their crimes are less likely to be witnessed by others and often go undetected.

The source for their stat was the FBI after Hillary Clinton was finished castrating it. However, in contrast to the FBI, I actually took the trouble to investigate this question and compiled a long list of black serial killers who were often intentionally ignored by the Jews' Media and other disreputable entities like the *Southern Prevarication Lie Center*. (Found under the **Reference Tab**, above, on the CofCC Homepage at Conservative-Headlines.org or cofcc.us.)

The 2023 *Annual Report on Serial Killer Statistics* by **Redford University** and **Gulf Coast University** demonstrate that the majority of serial murderers in the U.S. are blacks.* Even though blacks are only 13 percent of the U.S. population, they still represent a majority of all serial killers in this country. The following are some of the key findings by this on-going study:

#1 Since 1990, the majority of U.S. serial killers were Black (50.9 %,) followed by White (36.3 %), Hispanic (10.6 %), Asian (1.9 %), and Native American (0.4 %).

#2 In every decade, the percentage of black serial killers exceeds the percentage of blacks in the U.S. population.

#3 The percentage of black serial killers in the United States has steadily increased across the decades from a low of 17 % in the 1920s to over 57 % in the 2010s.

This study is a vindication of Phyllis Schlafly's wry observation that ordinary people know 20 years in advance what it takes social scientists decades to prove empirically, and then only after extensive study. That's not a criticism of these researchers or their valuable study: it's just one of those seeming paradoxes that are often found in this dishonest age in which we live.
